Cluster Framework

## A cluster is a concentration of related industries in a particular location.

## Traded vs. Local Clusters

## TRADED CLUSTERS

Groups of related industries that serve markets beyond the region in which they are located.

Flexible in choice of location of operation (unless linked to natural resources).

Concentrated in regions with specific competitive advantages.
Higher wages and levels of innovation
Examples: Financial Services in New York, IT in Silicon Valley, and Video Production and Distribution in LA.

LOCAL CLUSTERS
Industries that serve the local market.

Available in every market because they serve the local population; employment is proportional to the size of the population they serve.

Prevalent in all markets regardless of competitive advantages
Higher levels of employment
Examples: local entertainment, local health services, local commercial services.
